Executive Summary

This report summarizes the frozen Route A paper package in `results/paper-snapshot-20260607/`.

Working title:

LIMEN: A Public-Source Observatory for AI Edge Cases

Central claim:

LIMEN demonstrates a reproducible public-source method for structuring heterogeneous AI edge-case evidence under explicit claim ceilings.

The paper is framed as a methods/data-observatory paper, not an incident-prevalence paper. The contribution is the research infrastructure: evidence tiers, source-family saturation, duplicate control, legal uncertainty, translation caution, residual taxonomy, public-link limitations, and dashboard-ready observability.

Frozen Denominator

The headline paper denominator is frozen on the synchronized `limen-boost-011` publication-safe aggregate.

Quantity	Value
Publication-safe lineages	21
Raw normalized rows reviewed before collapse	29
Derivative queue rows excluded	7
High confidence-cap lineages	15
Low confidence-cap lineages	6
Translation-dependent lineages	6

Later local controls record a wider post-FTC live duplicate/taxonomy surface of 33 visible governed rows / 25 unique lineages. This report does not silently adopt that wider denominator. It treats the newer FTC, Springer, and Datatilsynet material as non-denominator anchors or sidecars unless a synchronized recomputation is performed.

Public IDs

The snapshot creates stable public-facing IDs and keeps old local IDs as provenance aliases. This prevents reviewer-visible collision hazards from bare IDs such as LIMEN-000001, which are reused across local shards.

Prefix roles:

Prefix	Role
LIMEN-AUTH	Authoritative regulator, enforcement, court-facing, or official-source rows
LIMEN-SEC	Security and agentic-control rows
LIMEN-ML	Multilingual and language-dependent rows
LIMEN-RI	Research-integrity source-depth anchors
LIMEN-FTC	FTC sidecars and complex official candidates
LIMEN-PS	Public-sector governance anchors

Core mapping file:

`stable-public-id-alias-map.tsv`

Dashboard Export Bundle

Core dashboard-consumable files:

Export	Purpose
<code>exports/cases.tsv</code>	Case table with public IDs, source families, evidence tiers, confidence caps, and denominator roles
<code>exports/sources.tsv</code>	Compact source table for paper/dashboard use
<code>exports/authoritative-source-anchors.tsv</code>	Paper-facing public source anchors
<code>exports/evidence-funnel.tsv</code>	Evidence-tier and confidence-cap funnel
<code>exports/duplicate-graph.tsv</code>	Duplicate/collision graph
<code>exports/taxonomy-heatmap.tsv</code>	Last synchronized taxonomy heatmap
<code>exports/legal-uncertainty-matrix.tsv</code>	Stronger-source-needs and legal-caution matrix
<code>exports/public-link-audit.tsv</code>	Public-link retrieval audit
<code>exports/public-link-source-check-notes.tsv</code>	Source-check notes for important anchors and barriers
<code>exports/source-depth-ladder.tsv</code>	Figure-ready ladder showing why T3 is not uniform
<code>exports/caption-claim-ceiling-registry.tsv</code>	Caption and claim-ceiling controls

The JSON manifest is `manifest.json`.

Non-Denominator Anchors

These rows are included for paper value but do not change the headline 21-lineage denominator.

Public ID	Role	Claim ceiling
LIMEN-RI-000001	Springer direct publisher/editor notice anchor	Notice-bounded statements about unverifiable references, peer-review-policy failure, and author-stated generative-AI reference conversion
LIMEN-RI-000002	Springer book/chapter direct notice appendix comparator	Notice-bounded reference-validity statements; no generative-AI causation unless directly sourced
LIMEN-FTC-000001	DoNotPay non-finance official AI-claim sidecar	FTC complaint/final-order posture only; no judicial unauthorized-practice or product-truth conclusion
LIMEN-FTC-000002	Workado / Content at Scale AI detector-governance sidecar	FTC complaint/final-order posture only; no general detector-validity conclusion
LIMEN-PS-000001	Danish Datatilsynet SU AI public-sector governance anchor	Governance/source-depth anchor only; not a harm case, legality finding, or compliance/certification proof
LIMEN-FTC-000003	Rytr complex-posture candidate	Hold for full complaint/order/set-aside chronology
LIMEN-FTC-000004	Air.ai document-read-pending candidate	Hold until complaint/order reading establishes exact AI role

Figure Set

Recommended publishable figure set:

Figure	Title	Input
1	Source-family observability map	exports/source-families.tsv, exports/category-source-family-counts.tsv
2	Evidence-tier funnel with confidence caps	exports/evidence-funnel.tsv, exports/cases.tsv
3	Duplicate/collision graph	exports/duplicate-graph.tsv, stable-public-id-alias-map.tsv
4	Taxonomy heatmap with residual and zero-seed rows	exports/taxonomy-heatmap.tsv, exports/legal-uncertainty-matrix.tsv
5	Source-depth ladder showing why T3 is not uniform	exports/source-depth-ladder.tsv, exports/authoritative-source-anchors.tsv

Each figure needs a paired “forbidden overread” caption note. Counts are observability counts, not prevalence estimates.

Negative Results

The negative-results table is central, not decorative. It shows that public evidence sometimes supports only a bounded claim ceiling.

Selected negative results:

Record	Visible	Not safe to infer
EEOC iTutorGroup	EEOC lawsuit and settlement summaries	Open court-originating complaint/decreed text or judicial merits finding
Nate	DOJ charging-stage page and indictment PDF	Guilt, liability, disposition, or hidden-human prevalence
NEJM	DOI/retraction metadata	Retraction rationale from blocked publisher notice
SEC Delphia/Global Predictions	Prior captured order metadata and press release	Current shell retrieval from this host; no bypass
FTC DoNotPay/Workado	Public pages and locally represented PDFs	Frictionless source surface or generalized sector claims
Helsinki/Amsterdam public-sector traces	Register/procurement signals	Exact contract proof, deployment impact, legality, or completeness
Datatilsynet SU AI	Official Danish decision page	Harm, illegality, compliance, certification, or failed deployment

Full table:

`review/negative-results-table.tsv`

Reliability Status

The snapshot includes a coding protocol and an internal two-pass dry-run:

- `review/coding-protocol-v0.1.md`
- `review/reliability-audit-v0.1.tsv`

The dry-run is not inter-rater reliability. A submission-ready reliability section should either add a true second-coder audit or report the current file as a single-team adjudication audit without kappa or alpha statistics.

Claim Boundary

Allowed:

- LIMEN structures heterogeneous public-source evidence under explicit claim ceilings.
- The frozen package contains 21 publication-safe lineages.
- The dashboard exports make evidence limits inspectable.
- Source family and document depth shape what claims can responsibly be made.

Not allowed:

- AI harms are increasing.
- The atlas is complete.
- A country, company, sector, or source family is worse.
- Complaint allegations are final findings.
- Official records automatically support legal conclusions.
- A row proves compliance, certification, legality, safety, efficacy, or prevalence.

Next Submission Steps

1. Run a true second-coder audit or keep the reliability dry-run labeled as non-inter-rater.
2. Decide whether DoNotPay remains sidecar-only or triggers a synchronized denominator recomputation.
3. Keep Workado appendix/detector-governance unless a bounded detector branch is deliberately opened.
4. Add one non-Springer direct research-integrity notice only if publisher-diversity language is needed.
5. Draft the paper around the five figures and the negative-results table.
